We #Renovate MultiHome Together

MultiHome will support the decarbonized and low-emission integrated renovation of the residential buildings in Plovdiv Region by piloting an integrated home renovation model encompassing strong technical expertise and multi-level cooperation between homeowners, renovation businesses, public authorities, and financial institutions aiming to ease the home renovation journey, reduce the complexity and simplify the decision-making process on behalf of the homeowners.

The MultiHome Service Hub and Platform will offer a single access-point for homeowners to reliable information and advice from highly qualified energy experts. They will support them in choosing ambitious and holistic measures and technologies for energy efficiency and RES for their home or building. The platform will offer trusted energy technology providers, products and services for citizens, as well as good practices and examples of ambitious building renovation.

MultiHome

*Stakeholder Cooperation Service Hub and Platform
for Accelerated Home Renovation in Plovdiv Region*

The **MultiHome** challenges:

In Bulgaria, over 90% of the residential buildings has the lowest energy performance levels (E, F, G) and only 7% is compliant with the contemporary energy efficiency requirements.

The aging residential building stock contributes to 80% of the high final energy consumption as well as the greenhouse and air pollution emissions.

Since 2012, in Plovdiv Region, only 128 multi-family buildings with over 7 600 dwellings have been renovated, which is less than 0.7% of all residential buildings and 5% of their dwellings.

The **MultiHome** project and its services will overcome the challenges by:

Establishing an integrated home renovation service with highly qualified and experienced experts to support the homeowners across the entire renovation journey, thus accelerating the Renovation Wave; and,

Establishing a lasting cooperation model between homeowners, renovation businesses and public authorities which will mobilise their collaboration and foster long-term customer-centred business models, thus sustaining the Renovation Wave without state-dependent funding.

The **MultiHome** objectives are:

Establish a **multi-stakeholder cooperation model** for integrated home renovation of single- and multi-family buildings that supports and encourages the joint implementation of ambitious and innovative energy efficiency and RES actions;

Launch a **MultiHome Service Hub and Platform** encompassing strong technical expertise and professional advice bridging homeowners, renovation businesses, public authorities, and financial institutions;

Accelerate the renovation market through bundling services and technologies along the renovation value chain in “package deals” thus empowering and increasing the trust of the homeowners to make informed decisions for the renovation of their dwellings;

Mobilise the stakeholders in novel, **socially-responsible and all-inclusive business models** based on the homeowners' own financial commitment or third-party financing;

Facilitate the networking and increase the awareness and capacity for integrated renovation of homeowners, renovation professionals, and local authorities through active public campaigning, incl. brokerage marketplaces, match-making and roadshow events and participatory sessions.
